

MICROWAVE AND RE-HEATING INSTRUCTIONS FOR PUDDINGS

Thaw prior to microwaving or re-heating.

Remove top from pudding container and microwave on high for approximately 45 seconds. The Sauce in the bottom of the container should be very warm to the touch. Place plate on top of container and turn over. The pudding will fall out of its mold very easily. Container can also be re-heated in a 300- degree convection oven or 325-degree rotating rack oven for 10-15 minutes

DO NOT MICROWAVE OR RE-HEAT FROZEN

We recommend serving with pouring cream, whipped cream or vanilla ice cream.

Microwave ovens vary so we suggest you microwave for a shorter period of time until you arrive at the correct microwave time.
