

BAKING INSTRUCTIONS PRE-DEPOSITED MUFFINS

Remove frozen muffins from carrier tray and place in your own muffin pans (we recommend Chicago Metallic pan # 44705 or similar).

Allow muffin batter to totally defrost before baking (1-2 hours). We do suggest defrosting under refrigeration if possible. Muffin is baked when a knife inserted in the center of the muffin comes out clean.

Baking times and temperature:

Convection oven: 35-40 min @ 300°.

Rotating rack oven: 35-40 min @ 330°.

Muffins may be defrosted in the cooler overnight.

Since individual ovens vary, please make necessary adjustments.
